

A feature's Technical Specification consisting of:

- \* Description of the use cases and solution
- \* Conceptual information model
- \* Impact assessment of the changes needed to the overall information model, the schemas, documentation and other products that make up the standard

A pipeline of finalised Technical Specifications are fed into the team responsible for writing and revising the core products that make up the formal definition of the standard

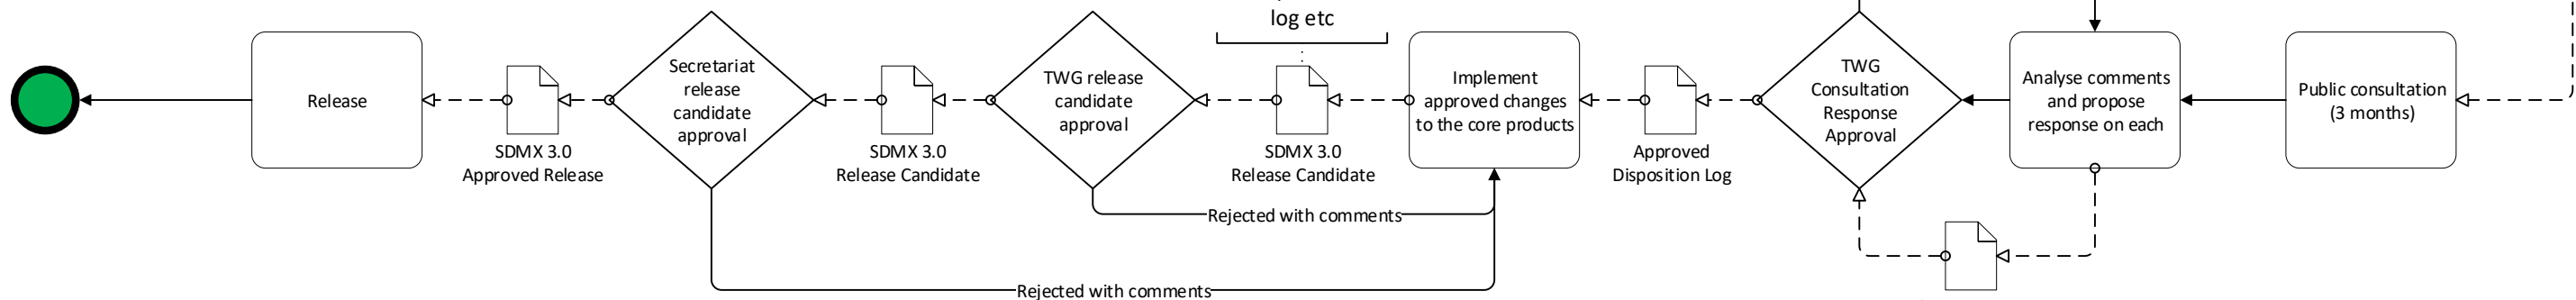

Implement the specified changes to the core products that make up the Standard

The Technical Specifications for the various features intended for inclusion in SDMX 3.0 are developed in parallel by the TWG's Task Force Teams

The Release Candidate is all of the core products, plus the summary of changes, disposition log etc

SDNMX 3.0 Delivery Project
Development and Release Process
